

# The ifluatex package

Heiko Oberdiek\*  
<heiko.oberdiek at gmail.com>

2016/05/16 v1.4

## Abstract

This package looks for LuaTeX regardless of its mode and provides the switch `\ifluatex`. Also it makes `\luatexversion` available if it is not present. It works with plain TeX or L<sup>A</sup>TeX.

# 1 Documentation

The package `ifluatex` can be used with both plain  $\text{\TeX}$  and  $\text{\LaTeX}$ :

**plain  $\text{\TeX}$ :** `\input ifluatex.sty`

**$\text{\LaTeX 2}_{\epsilon}$ :** `\usepackage{ifluatex}`

`\ifluatex`      The package provides the switch `\ifluatex`:

```
\ifluatex
  Lua $\text{\TeX}$  is running
\else
  Without Lua $\text{\TeX}$ 
\fi
```

Since version 0.39 Lua $\text{\TeX}$  only provides `\directlua` at startup time. Also the syntax of `\directlua` changed in version 0.36. Thus the user might want to check the Lua $\text{\TeX}$  version. Therefore this package also makes `\luatexversion` and `\luatexrevision` available, if it is not yet done.

If you want to detect the mode (DVI or PDF), then use package `ifpdf`. Lua $\text{\TeX}$  has inherited `\pdfoutput` from `pdf $\text{\TeX}$` .

## 2 Implementation

```
1 (*package\
```

### 2.1 Reload check and package identification

Reload check, especially if the package is not used with  $\text{\LaTeX}$ .

```

```

## 2.3 Macro for error messages

\ifuatex@Error

```

114 \begingroup\expandafter\expandafter\expandafter\endgroup
115 \expandafter\ifx\csname PackageError\endcsname\relax
116   \def\ifuatex@Error#1#2{%
117     \begingroup
118     \newlinechar=10 %
119     \def\MessageBreak{^^J}%
120     \edef\x{\errhelp{#2}}%
121     \x
122     \errmessage{Package ifuatex Error: #1}%
123   \endgroup
124 }%
125 \else
126   \def\ifuatex@Error{%
127     \PackageError{ifuatex}%
128   }%
129 \fi

```

## 2.4 Check for previously defined \ifuatex

```

130 \begingroup
131 \expandafter\ifx\csname ifuatex\endcsname\relax
132 \else
133   \edef\i/{\expandafter\string\csname ifuatex\endcsname}%
134   \ifuatex@Error{Name clash, \i/ is already defined}{%
135     Incompatible versions of \i/ can cause problems,\MessageBreak
136     therefore package loading is aborted.%
137   }%
138 \endgroup
139 \expandafter\ifuatex@AtEnd
140 \fi%
141 \endgroup

```

## 2.5 \ifuatex

\ifuatex

```

142 \let\ifuatex\iffalse

```

Test `\luatexversion`. Is it defined and different from `\relax`? Someone could have used L<sup>A</sup>T<sub>E</sub>X internal `\@ifundefined`, or something else involving. Notice, `\csname` is executed inside a group for the test to cancel the side effect of `\csname`.

```

143 \begingroup\expandafter\expandafter\expandafter\endgroup
144 \expandafter\ifx\csname luatexversion\endcsname\relax
145 \else
146   \expandafter\let\csname ifluatex\expandafter\endcsname
147     \csname iftrue\endcsname
148 \fi

```

## 2.6 LuaT<sub>E</sub>X v0.39

Starting with version 0.39 LuaT<sub>E</sub>X wants to provide `\directlua` as only primitive at startup time beyond vanilla T<sub>E</sub>X's primitives. Then `\directlua` exists, but `\luatexversion` cannot be found. Unhappily also the syntax of `\directlua` changed in v0.36, thus the user would want to check `\luatexversion`. Therefore we make `\luatexversion` available using LuaT<sub>E</sub>X's Lua function `tex.enableprimitives`.

```

149 \ifluatex
150 \else
151   \begingroup\expandafter\expandafter\expandafter\endgroup
152   \expandafter\ifx\csname directlua\endcsname\relax
153   \else

```

## 5 Installation

### 5.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/ifluatex.dtx](http://ctan.org/macros/latex/contrib/oberdiek/ifluatex.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/ifluatex.pdf](http://ctan.org/macros/latex/contrib/oberdiek/ifluatex.pdf) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://ctan.org/install/macros/latex/contrib/oberdiek.tds.zip)

*TDS* refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:tds/tds.pdf](http://ctan.org/tds/tds.pdf)). Directories with `texmf` in their name are usually organized this way.

### 5.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

---

<sup>1</sup><http://ctan.org/pkg/ifluatex>

**Script installation.** Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

### 5.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain  $\text{T}_{\text{E}}\text{X}$ :

```
tex ifuatex.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
ifuatex.sty      → tex/generic/oberdiek/ifuatex.sty
ifuatex.pdf      → doc/latex/oberdiek/ifuatex.pdf
test/ifuatex-test1.tex → doc/latex/oberdiek/test/ifuatex-test1.tex
test/ifuatex-test2.tex → doc/latex/oberdiek/test/ifuatex-test2.tex
test/ifuatex-test3.tex → doc/latex/oberdiek/test/ifuatex-test3.tex
ifuatex.dtx      → source/latex/oberdiek/ifuatex.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 5.4 Refresh file name databases

If your  $\text{T}_{\text{E}}\text{X}$  distribution (`te $\text{T}_{\text{E}}\text{X}$` , `mik $\text{T}_{\text{E}}\text{X}$` , ...) relies on file name databases, you must refresh these. For example, `te $\text{T}_{\text{E}}\text{X}$`  users run `texhash` or `mktextlsr`.

### 5.5 Some details for the interested

**Unpacking with  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ .** The `.dtx` chooses its action depending on the format:

**plain  $\text{T}_{\text{E}}\text{X}$ :** Run `docstrip` and extract the files.

**$\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ :** Generate the documentation.

If you insist on using  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$  for `docstrip` (really, `docstrip` does not need  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ ), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{ifuatex.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with `pdf $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$` :

```
pdflatex ifuatex.dtx
makeindex -s gind.ist ifuatex.idx
pdflatex ifuatex.dtx
makeindex -s gind.ist ifuatex.idx
pdflatex ifuatex.dtx
```

## 6 Catalogue

The following XML file can be used as source for the **TeX Catalogue**. The elements **caption** and **description** are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is **ifluatex.xml**.

### [2007/12/12 v1.0]

- First public version.

### [2009/04/10 v1.1]

- Test adopted for LuaTeX 0.39.
- Makes `\luatexversion` available.

### [2009/04/17 v1.2]

- Fixes (Manuel Pégourié-Gonnard).
- `\luatextrue` and `\luatexfalse` are no longer defined.
- Makes `\luatexrevision` available, too.

### [2010/03/01 v1.3]

- Line ends fixed in case `\endlinechar = \newlinechar`.

### [2016/05/16 v1.4]

- Documentation updates.

## 8 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
